Notes: Dependent variable: annual dark matter exports divided by GDP, computed with the original H&S assumption $NFA^{DM} = NII/0.05$. Safe-haven countries: USA, CHE, DEU, GBR, JPN, NLD, AUT, DNK, NOR. Columns (1)–(2): heteroskedasticity-robust standard errors. Columns (3)–(5): standard errors clustered by country. In column (5), year fixed effects absorb the aggregate VIX level. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
