FE: iso3c			X	X	X
FE: year					X

Notes: Dependent variable: annual dark matter exports divided by GDP. Safe-haven countries: USA, CHE, DEU, GBR, JPN, NLD, AUT, DNK, NOR (Maggiori 2017). Columns (1)–(2): heteroskedasticity-robust standard errors. Columns (3)–(5): standard errors clustered by country. In column (5), year fixed effects absorb the aggregate VIX level, so only the differential response of safe havens relative to other countries is identified. A positive and significant interaction confirms that H&S's insurance mechanism is countercyclical, not merely a cross-sectional regularity. * p<0.10, ** p<0.05, *** p<0.01.
