

Table 2: Extension 1b — Horse Race: VIX vs. GPR as Drivers of Safe-Haven Dark Matter (1990–2022)

	(1) VIX	(2) GPR	(3) VIX + GPR	(4) OPEC excl.
$\Delta \log(\text{VIX}) \times \text{Safe haven}$	-30.2899*** (10.9468)		-23.7063*** (7.6911)	-23.9809*** (7.6582)
$\Delta \log(\text{VIX}) \times \text{OPEC}$	8.5364 (24.2313)		8.8485 (14.6476)	
FDI liabilities / GDP	0.0478 (0.1363)	0.0380 (0.1338)	0.0403 (0.1346)	0.0333 (0.1501)
FDI assets / GDP	-0.0205 (0.1050)	0.0071 (0.1014)	-0.0111 (0.1040)	-0.0129 (0.1144)
Country FE	Yes	Yes	Yes	Yes
Year FE	Yes	Yes	Yes	Yes
$\Delta \log(\text{GPR}) \times \text{Safe haven}$		-9.6605* (4.9107)	-5.2119 (4.2073)	-5.1740 (4.1891)
$\Delta \log(\text{GPR}) \times \text{OPEC}$		1.3815 (22.9161)	-0.2662 (23.9610)	
Num.Obs.	1037	1037	1037	955
R2	0.072	0.071	0.072	0.069
FE: iso3c	X	X	X	X
FE: year	X	X	X	X

Notes: All columns include country and year fixed effects. The aggregate VIX and GPR levels are absorbed by year dummies; only the differential response of each group to a common shock is identified. GPR = Caldara & Iacoviello (2022, AER P&P) Geopolitical Risk Index, constructed from automated text searches in 10 major English-language newspapers. If $\Delta \log(\text{GPR}) \times \text{Safe haven}$ is positive and significant after controlling for VIX, geopolitical safety generates a premium independently of financial market volatility. Standard errors clustered by country. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
