

Table 3: Extension 2 — Intangible Capital Intensity and Dark Matter (1980–2022)

	(1) Baseline	(2) + R\&D	(3) + Composite	(4) Horse race	(5) Industrial
(Intercept)	0.900*** (0.214)	1.557*** (0.302)	1.207*** (0.235)	1.489*** (0.309)	-0.530 (0.765)
FDI assets / GDP	-0.764*** (0.239)	-0.382 (0.236)	-0.472* (0.253)	-0.306 (0.247)	-2.409** (0.970)
FDI liabilities / GDP	0.715*** (0.224)	0.353 (0.221)	0.434* (0.238)	0.279 (0.232)	2.557** (1.116)
Output volatility (HP)	-29.063*** (4.922)	-34.092*** (5.823)	-34.468*** (5.123)	-34.897*** (5.872)	7.646 (24.444)
R\&D / GDP		-0.449*** (0.121)		-0.283 (0.201)	
Composite intangible index			-0.480*** (0.177)	-0.312 (0.301)	0.287 (0.528)
Num.Obs.	75	71	75	71	17
R2	0.384	0.404	0.442	0.414	0.533
R2 Adj.	0.357	0.368	0.410	0.369	0.378

Notes: Dependent variable: cumulative dark matter exports over 1980–2022, divided by end-year GDP. The composite intangible index is the row mean of four z-standardised components: R&D/GDP, log resident patent applications, log high-technology export share, and log ICT service exports (at least two components required per country). Following Corrado, Hulten & Sichel (2009), R&D captures only $\sim 30\%$ of total intangible investment; the composite index recovers the remainder. Column (4): horse race between H&S's R&D proxy and the composite. Column (5): restricted to industrial countries (Keller & Yeaple 2013). All variables winsorised at the 1% level. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
