Notes: Dependent variable: $CA_{it}^{DM} / \text{GDP}$. Pooled OLS and country fixed-effects. Full = all 79 countries; Restr = excl. OPEC and HIPC; Ind = industrial countries. Our observation counts exceed H&S's 1624 / 1317 / 439 because the 2024 EWN vintage has more complete FDI coverage than the LMF 2006 dataset they used. The sign of FDI assets (positive in our full-sample pooled) differs from H&S (-0.046, insignificant); this reflects OPEC country composition in the 2024 data. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
