

Table 3: Extension 2 — Intangible Capital Intensity and Dark Matter (1980–2022)

	(1) Baseline	(2) + R\&D	(3) + Composite	(4) Horse race	(5) Industrial
(Intercept)	0.628** (0.284)	1.119** (0.440)	1.005*** (0.315)	0.900** (0.435)	1.680* (0.924)
FDI assets / GDP	-0.449 (0.319)	-0.149 (0.345)	-0.091 (0.342)	0.087 (0.348)	1.206 (1.332)
FDI liabilities / GDP	0.384 (0.299)	0.102 (0.323)	0.041 (0.321)	-0.128 (0.327)	-1.983 (1.483)
Output volatility (HP)	-28.776*** (6.563)	-32.748*** (8.476)	-35.077*** (6.854)	-34.432*** (8.230)	-12.272 (36.887)
R\&D / GDP		-0.332* (0.174)		0.183 (0.274)	
Composite intangible index			-0.566** (0.231)	-0.950** (0.398)	-1.102 (0.713)
Num.Obs.	78	74	78	74	19
R2	0.228	0.199	0.287	0.261	0.579
R2 Adj.	0.197	0.153	0.248	0.207	0.458

Notes: Dependent variable: cumulative dark matter exports over 1980–2022, divided by end-year GDP. The composite intangible index is the row mean of four z-standardised components: R&D/GDP, log resident patent applications, log high-technology export share, and log ICT service exports (at least two components required per country). Following Corrado, Hulten & Sichel (2009), R&D captures only $\sim 30\%$ of total intangible investment; the composite index recovers the remainder. Column (4): horse race between H&S's R&D proxy and the composite. Column (5): restricted to industrial countries (Keller & Yeaple 2013). All variables winsorised at the 1% level. * $p < 0.10$, ** $p < 0.05$, *** $p < 0.01$.
